

### FGR200-Positive Displacement Flow Meter(Gear Flow Meter)

- ▶ High pressure rating
- ▶ Applicable to various viscous media
- ▶ High repeatability and accuracy
- ▶ Pulse / analog output selectable
- ▶ Wide measuring range

FGR200 positive displacement flow meter measures the flow on the volumetric principle, in which gearwheels is moved proportional to the flow rate. The movement of the gearwheels is measured through the enclosing housing wall by a sensor.

Immune to medium viscosity. Higher trndown ratio, accuracy, resolution and responsibility, as well as for measuring the very-low flow.

Assembled with journal bearings FGR200 can measure low or non-lubricating fluids, such as paints, glues, resin, sealant etc.

The FGR200 series of positive displacement flow meters have 9 measuring ranges from 0.006 ... 1L/min through 4.0 ... 450L/min. Optional pickoffs forpulse output, current analog output and voltage analog output.
